

STARVIEW™

Hot/Cold Sealers for Plastic-to-Plastic Sealing and Blister to Card Heat Sealing PHS Series

**PATENT
PENDING**

Starview's PHS Series Hot/Cold sealers are ideal for clamshell and double-blister packaging. Semi-automatic and fully automatic rotary type machines are offered.

The *PHS Series* offers high production rates and a quick and simple, no hand tools, tooling changeover. All motions and functions are coordinated using a PLC and touch screen operator interface panel. The operator interface panel includes machine diagnostics and electrical, pneumatic and mechanical parts lists. PHSA fully automatic machines include a **color touch screen** that includes the temperature controllers and electrical schematics with zoom feature on screen. The *PHS Series* includes an **AC variable frequency CAM index drive system** for smooth and trouble free operation. All structures are manufactured of heavy gauge welded steel.

These machines eliminate the need for costly and troublesome Radio Frequency machines and tooling. The *PHS Series* offers accelerated cycle speeds, ease of operation and low maintenance. As an added benefit the *PHS Series* units can also be used for conventional blister sealing (blister to card) applications.

Six station semi-automatic models can be provided with an optional self-standing finished package un-loader & one auxiliary card/blister feeder. Eight-station models can be furnished with three auxiliary card/blister feeders & a finished package un-loader. Fully automatic models include a finished package un-loader and three auxiliary feeders as standard.
